DALI232e

DALI ↔ RS232 converter

ASCII protocol

MULTIMASTER support

DALI bus connection indication

DALI communication indication

Various length of DALI message support

galvanic isolation of DALI and TTL UART

Technical specification		
power supply DTR	DC 3 (optionally 5)	V
power consumption from DTR	5	mA
DALI current consumption (idle)	1,8	mA
wires cross section (DALI)	2,54	mm
galvanic isolation	4	kV
ambient working temperature	0 ÷ 50	°C
storage temperature	-10 ÷ 70	°C
weight	5	g

Function

DALI232e supports two protocols. Simple **ASCII** protocol and **Modbus**. Both protocols are available at once.

ASCII protocol

Communication with DALI232e converter is done by serial line RS232 using simple ASCII protocol. This protocol is described in separate datasheet which is downloadable on www.foxtron.eu.

Through the agency of the converter DALI232e is control device able to send and receive messages on DALI bus. Except of standard messages user messages with various length can be sent and received.

DALI232e supports Multimaster communication (more master devices can communicate on DALI bus). Control device can send data at any time and collisions are solved by DALI232e converter.

DALI232e sends to control device all communication on DALI bus. Answers on DALI bus are sent to RS232 in one message together with appropriate query, even in case, that the query was sent by another device.

Control device is automatically informed about collisions on DALI bus (framing error) and other states (for example: short connection or main voltage on the DALI bus).

MODBUS

Using MODBUS RTU it is possible to command lights on the DALI bus. Controlled can be standard DALI ballasts and also extension for color management (RGB/RGBW) and color temperature (Tc) – DALI type 8.

To write values to DALI232, MODBUS function 16 (0x10) "Write multiple registers" is used. Choosing a register selects for which type of light will messages be send. Registers 1-162 are for standard DALI, 163-810 for DALI type 8 (color control).

By selecting a register can be determined message addressing on DALI. They can be sent as a Broadcast (to all units), to Group 0-15 or to specific address 0-63.

MODBUS register		DALI address	description	
1-2	1	Bcast	Standard DALI	Fade time (0-15)
	2			Direct arc power control level (DAPc 0-254)
3-34	3+x*2	Group x		Fade time (0-15)
	4+x*2			Direct arc power control level (DAPc 0-254)
35-162	35+x*2	Address x		Fade time (0-15)
	36+x*2			Direct arc power control level (DAPc 0-254)
163-170	163	Bcast	DALI type 8 RGBWAF (Color)	Fade time (0-15)
	164			Direct arc power control level (DAPc 0-254)
	165			Red (0-254)
	166			Green (0-254)
	167			Blue (0-254)
	168			White (0-254)
	169			Amber (0-254)
	170			Freecolor (0-254)
171-298	171+x*8	Group x		Fade time (0-15)
	172+x*8			Direct arc power control level (DAPc 0-254)
	173+x*8			Red (0-254)
	174+x*8			Green (0-254)
	175+x*8			Blue (0-254)
	176+x*8			White (0-254)
	177+x*8			Amber (0-254)
	178+x*8			Freecolor (0-254)
299-810	299+x*8	Address x		Fade time (0-15)
	300+x*8			Direct arc power control level (DAPc 0-254)
	301+x*8			Red (0-254)
	302+x*8			Green (0-254)
	303+x*8			Blue (0-254)
	304+x*8			White (0-254)
	305+x*8			Amber (0-254)
	306+x*8			Freecolor (0-254)
811-813	811	Bcast	DALI type 8 Tc (Color temperature)	Fade time (0-15)
	812			Direct arc power control level (DAPc 0-254)
	813			color temperature (Tc) = 1000000 / T[K]
814-861	814+x*3	Group x		Fade time (0-15)
	815+x*3			Direct arc power control level (DAPc 0-254)
	816+x*3			color temperature (Tc) = 1000000 / T[K]
862-1053	862+x*3	Address x		Fade time (0-15)
	863+x*3			Direct arc power control level (DAPc 0-254)
	864+x*3			color temperature (Tc) = 1000000 / T[K]

LED indication			
Rx	green	Permanent light	OK (power connected from serial line and DALI bus)
		Short blinking	Incoming data from DALI bus
Tx	red	Short blushing	Sending data to DALI
		1 blink	Short circuit or disconnected DALI bus
		2 blinks	On DALI bus is connected mains voltage
		3 blinks	Powered by power supply which is not designed to power DALI bus

Terminals connection

wire preparation (DALI)

connector RS232 D-SUB DE-9 F connection

connector: RS485 D-COD DE-V1 connection		
designation	description	
Vcc	Power supply of converter DALI232e (3-5V)	
GND	Signal and power ground	
TX	Sending data	
RX	Receiving data	
1	Signaling Tx	Description is in the “Signaling” section. Signaling on pins 1 and 2 is same as signaling of LED lights.
2	Signaling Rx	
DA, DA	DALI	

Communication

Communication with DALI232e takes place over 3V serial line (optionally it can be customized for 5V) using simple ASCII protocol. This protocol is described in separate document which is downloadable at www.foxtron.eu.
